4WD clutch - General

TABLE OF CONTENTS

A. 4-wheel drive clutch - General	141
---	-----

A. 4-wheel drive clutch - General

General

The front axle clutch assembly is fitted in the lower part of the gearbox. In order to access to the 4-wheel drive clutch, the transmission module must be removed.

This comprises:

- 1) a shaft (5) turning on two ball bearings fitted in the bore of the gearbox housing
- 2) a hydraulic clutch assembly integral with the rotating gear (15)
- 3) a disc carrier (9) centred on the shaft by needle roller bearings, which drives the clutch discs.

The helical gear (15) is constantly meshed to the idler gear on the pinion.

Declutching operation

The 4-wheel drive solenoid valve directs the 17 bar pressure inside the shaft (5) via a drilled channel in the gearbox housing.

The pressure moves the piston washer (20), which presses against the spring washers (17) via the piston (18), thus releasing the discs (30).

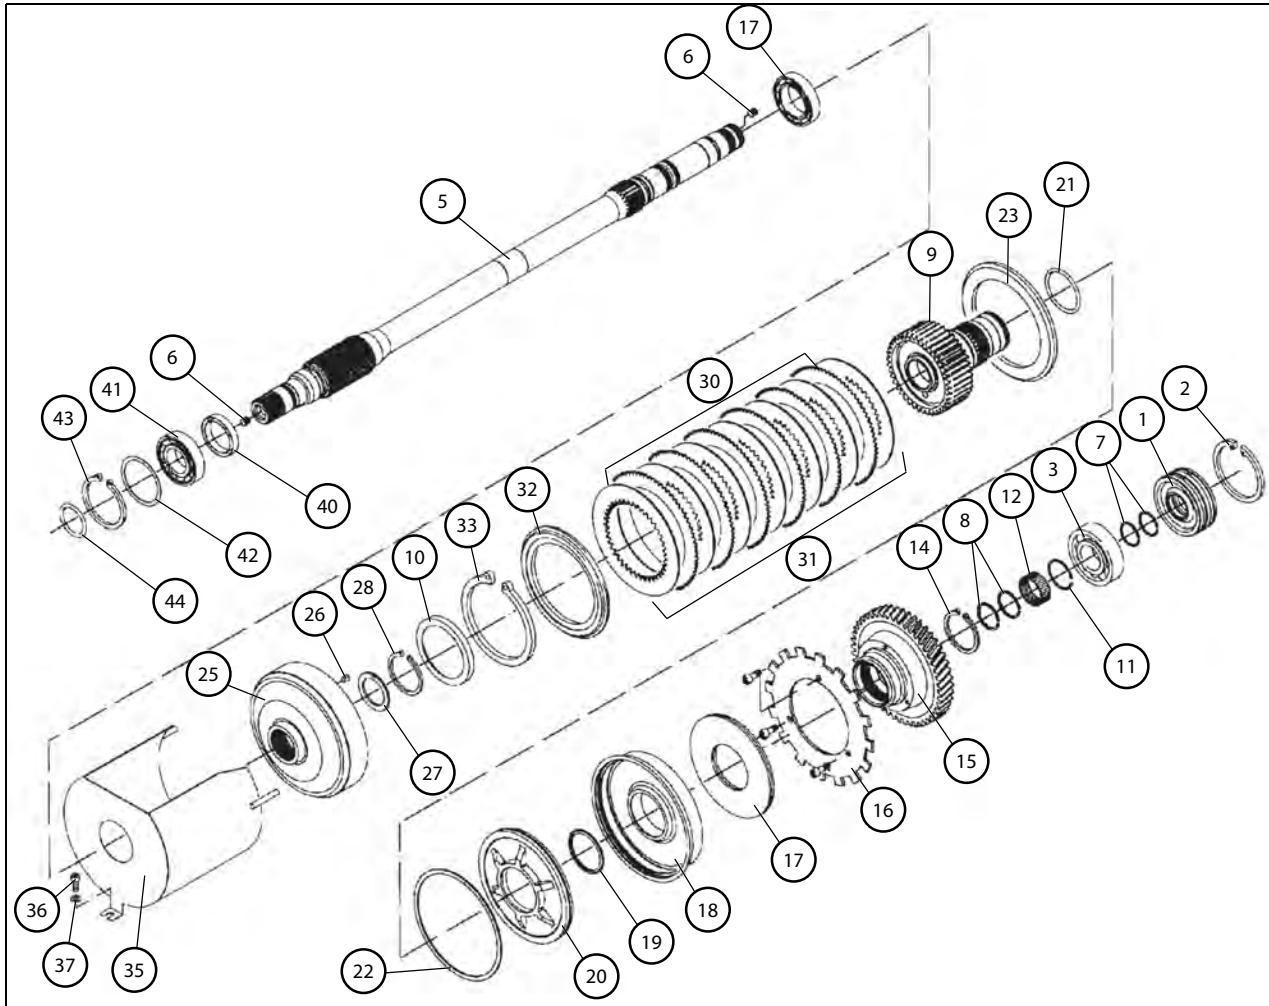

The disc carrier (9) integral with the shaft no longer turns.

Clutch operation

When the pressure is cut off, the spring washers are released and push the piston and piston-washer assembly; this compresses the discs (30), allowing the disc carrier (9) integral with the shaft to turn.
